REASONS FOR ALLOWANCE

1. Claims 19-21, 23, 24, 26-29, 42, and 44-46 are allowed.

The following is an examiner's statement of reasons for allowance:

- With regard to independent claim 21; as the closest reference of record, Sakakima et al (US 5,715,121) discloses a CPP spin-valve element formed on a substrate including: free layer structure including at least one ferromagnetic layer; a pinned layer structure including at least one ferromagnetic layer, the free layer is magnetically softer than the pinned layer; and a first thin non-magnetic current confining (CC)-layer structure configured to separate the free and pinned layers, to prevent a substantial magnetic coupling between said free and pinned layer structures, and to allow an electric current to go through the confined current paths; and a second CC-layer structure placed across at least one of the free layer and the pinned layer; wherein conducting parts of said CC-layers are located in a cascade manner; **but fails to show** that at least an a majority of the nearest inner edge to edge distances of a projection of the conducting parts of the CC-layers forming of the current paths through said free layer structure or said pinned layer onto the layer plane are made greater than the thickness of at least one of said free layer structure and said pinned layer.
- With regard to claims 19 and 28; as the closest reference of record, Sakakima et al (US 5,715,121) discloses a CPP spin-valve element formed on a substrate including: a free layer structure including at least one ferromagnetic layer; and a pinned layer structure including at least one ferromagnetic layer, the free layer is magnetically softer than the pinned layer; wherein at least one CC-layer structure is incorporated therein, which is configured to separate the free and pinned layers and to allow an electric current to go through the confined current paths; **but fails to show** that the width of at least one of the confined current paths of said at least one CC- layer structure is greater than $t^{3/2}$ where t is the thickness of at least one of said free layer structure and pinned layer measured in nano-meters.
- Applicant asserts; the present invention "is to provide a spin-valve element of a CPP structure that has a high resistance and which generates a high output signal with a low current" (Specification, p. 4).

Art Unit: 2627

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
